# Transform Everyday Information Into Business Intelligence.

Document Capture Automation
with GlobalCapture®

Easily capture, classify, validate and transform your business documents into usable information that provides insight, drives efficiency, and leads to smarter decision making. GlobalCapture enables you to arrange document processes that extract critical business information and put it into motion through automated capture workflows.

GlobalCapture allows organizations to work more intelligently with their documents.

Capture documents from any source including printers, scanners, email, web forms, or network directories that collect information using powerful extraction tools.

Integrate with your Multifunctional Printer (MFP) and take document scanning to the next level by incorporating unique workflow activities right from the touch panel.

Extract critical information from documents with structured or unstructured Optical Character Recognition (OCR), Barcode Recognition, tabular data, database lookups and more.

Review the integrity of your information before it's shared to other applications with OCR confidence reporting and validation checks to ensure data accuracy.

Instantly route documents to the destination of your choice, with a built-in workflow engine providing the ability to connect and automate your unique capture processes.

Share data with almost any application including ERP, CRM and HRM platforms, before releasing to your document management or Windows file system.

Get Started Today!
Discover a cost-effective solution for capturing your documents that gathers information and puts data into motion with less effort. Contact us to learn more.
